Medicines at Your Doorstep.

Never Miss a Dose Again: Building a Localized Medicine Refill Experience

Debolina Guha
Product Case Study | August 2025

Project Overview

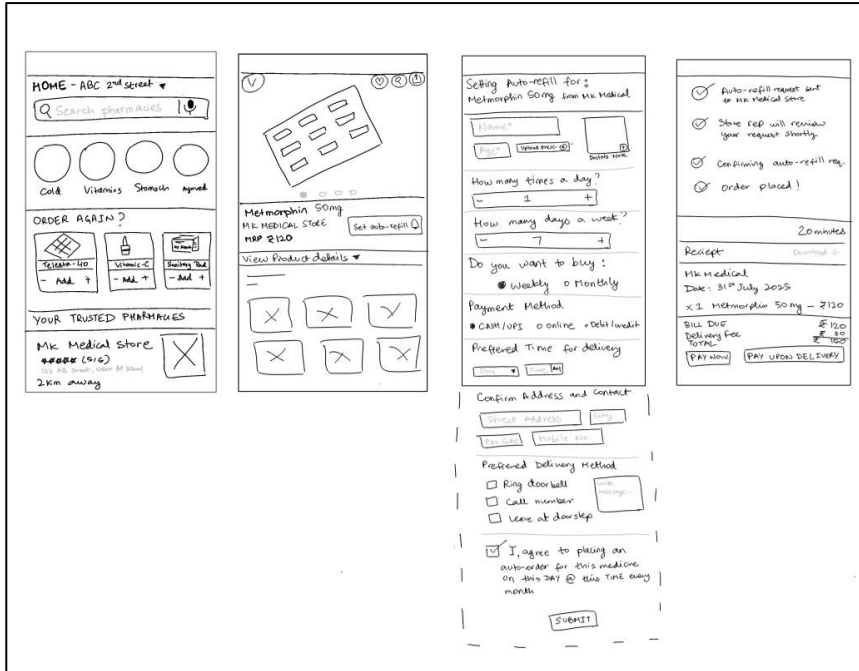

Mission:

On a mission to **make medicine delivery at your doorstep effortless for everyone, everywhere.**

Problem Statement:

Users who are elderly, live alone, or are unwell often struggle to access essential medicines quickly or consistently due to physical limitations, lack of support, or non-transparent online alternatives, making medicine accessibility a critical but underserved need. **The goal is to build a platform like Swiggy, but for medicines, where users can browse and order from nearby verified pharmacies.**

Customer Persona I

Profile:

Name: Ayan Gupta

Age: 25

Location: Delhi

Education: Media Studies

Job Title: Freelance Consultant

Personality:

Conservative	☐	Risk Taker
Closed mindset	☐	Growth Mindset
Analytical	☒	Creative

Bio:

Ayan is a freelance consultant who mostly works remotely from home and lives with his family. He has an overall good health condition with occasional sickness due to season change and needs to get over-the-counter medicines once in a while. He has family members who are on long-term medication for chronic disease and they get the required medicines by directly calling the pharmacy.

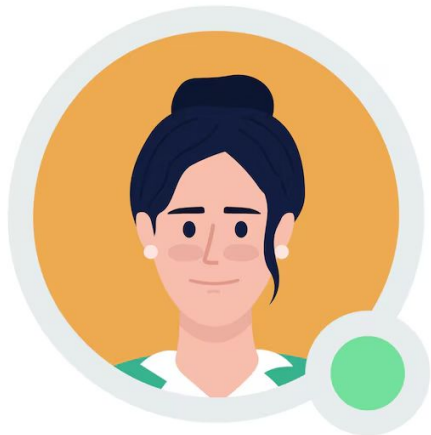

Goal and Motivation:

- A trustworthy resource which allows me to connect with my local stores and delivers correct and proper medication at my doorstep, if it's an app a reminder would be great at the of medication. Especially for elderly their caretakers could get a notification too.
- If a medication is available everywhere a price comparison will be great to get the best choice.
- When pills get mixed up, I would love a pill identifier.
- It would ease my anxiety if I can see and match my side effects with other people through the app(like tracking and logging of these maybe).
- Medication should come from a doctor but if my lifestyle and environment could be studied for personalised vitamins and supplements to better my health would be a cherry on top.

Frustration:

- A medication only available at a certain shop took months and loads of money to reach us.
- I often don't know what the medication is for and what the side effects could be, if taking the medication with my current medication would have any adverse effects (even if it's the slightest)

Customer Persona II

Profile:

Name: Anushka Shah

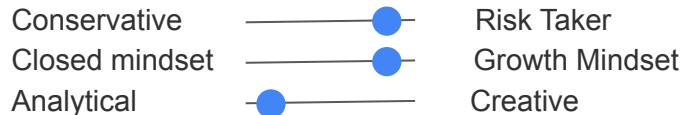

Age: 27

Location: Delhi

Education: Pharmacy

Job Title: Entrepreneur

Personality:

Bio:

Anushka is a business owner plus pharmacy student. She shuttle between living with her family and living in a hostel (during exam season). Overall healthy, she also gets occasional season flus and needs to get medicines monthly for herself and family, since some of her family members are dependent on long-term medication. They get their medicines by directly visiting nearby pharmacies.

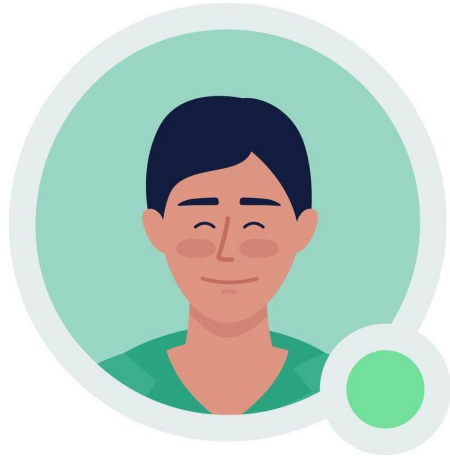

Goal and Motivation:

- My local pharmacy should mark my need of the regular medicine and deliver accordingly monthly.
- A go-to place where I can look for any kind of medicines based on requirement.

Frustration:

- Sometimes, when I'm not at home and if my family members need any medicines, we need to call for external help in order to do so.
- Since I take care of my aunt who is suffering from a severe mental health disorder, I need to get medicines for her every month, but due to my exams and business, sometimes I forget to get them or can't get them on time.

Customer Persona III

Profile:

Name: Jacob Creek

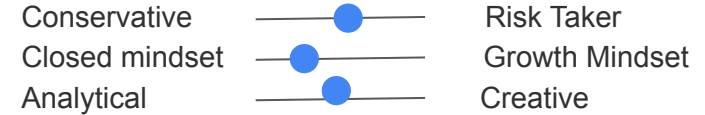

Age: 60

Location: Pune

Education: BCE Electrical Engineering

Job Title: CEO

Personality:

Bio:

Jacob has been running an IT firm for the last 15 years. He lives with his family. He and his wife are both on thyroid medication, which they need to take daily without a fail. He takes care of his mother, who has to take ~5 medicines per day (polypharmacy), which includes medicines for diabetes, blood pressure and lungs.

Goal and Motivation:

- Timely reminder with home delivery to replenish.
- Whatsapp reminders may be more useful as I am more likely to check those compared to text messages.

Frustration:

- Being a busy business owner, I sometimes get caught up in my work and forget to refill my mother's and my medicines.
- Usually, when I get home late, I am reminded of the medicines but by then I am too tired to go out again and get them.
- My mother's medicines help keep her vital levels in healthy state, missing them by a day or two does show some effects.

Ideation - Customer Segmentation

Customer Segmentation	Impact (1-5) How impactful to the users if pain points are resolved?	Urgency (1-5) How soon users like to have the pain points to be addressed?	Size of Market (1-5) How many people are suffering from this pain point?	Total
Middle-aged professionals (40-60)	3	4	3	10
Young professionals (26-40)	3	2	3	8
Students/ freelancers on budget (18-25)	3	2	2	8

Ideation - Customer Pain Points

Customer Pain Points	Impact (1-5) How impactful to the users if pain points are resolved?	Urgency (1-5) How soon users like to have the pain points to be addressed?	Size of Market (1-5) How many people are suffering from this pain point?	Total
Forgetting to Refill or Restock Medicines (Especially for Others)	5	5	4	14
Inaccessibility or Dependence on Manual Methods (Physically Going or Calling Pharmacies)	4	3	5	12
Lack of Information About Medicines and Replacements	3	2	1	6

Ideation Prioritization - Solutions

Customer Pain Point	Proposed Solutions	Ease of implementation (1=hard, 5=easy)	Engineering effort (1=hard, 5=easy)	Effectiveness (1=hard, 5=easy)	Total
Forgetting to Refill or Restock Medicines (Especially for others)	Auto-Refill + WhatsApp Confirmation (Low-effort Subscription)	3	4	5	12
	Smart In-App Refill Assistant (AI-based reminders + reorder)	2	1	3	6
	In-app medicine tracker (like a habit tracker) + reminder	4	5	2	11

MVP - Proposed Solution

North star metrics

- A platform to place auto-refill med orders

Stakeholders and Cross Functional Team

- 1 UX/UI Designer
- 1 Frontend Developer (Mobile)
- 1 Backend Developer

User Story & Requirement

Epic: As a busy working professional, who also takes care of the family, I want to have a reminder system that allows me to get long-term medicines on time from nearby trusted pharmacies.

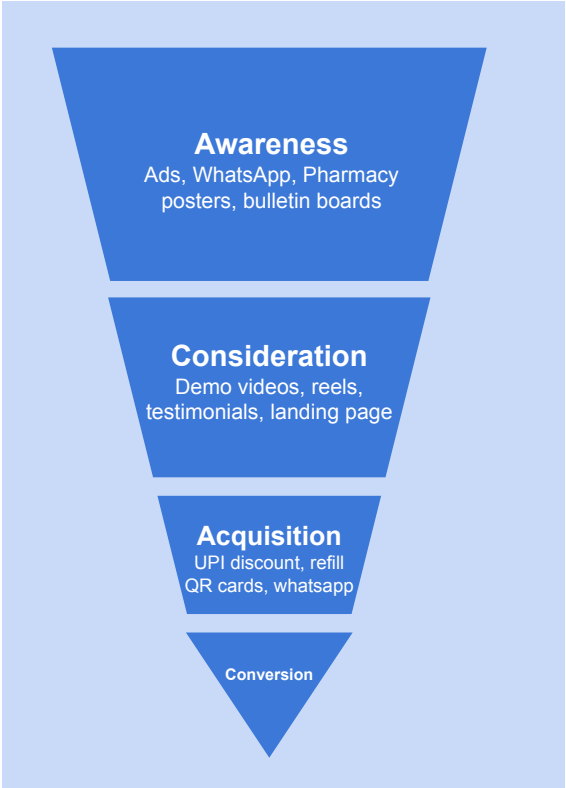

User Story	Acceptance Criteria
<u>Functionality</u> : min function the product needs to achieve	
I want to be able to select medicines for auto-refill so that I don't have to worry about missing the dates.	System should allow users to enroll in a recurring autofill plan for selected medicines during check-out .
I want to receive a simple WhatsApp message before my family's monthly medicine refill , so that I can confirm the order without needing to open an app or visit the pharmacy.	System should send a Whatsapp message to users 24 hrs prior to refill delivery, with a "Confirm" or "Skip" option.
I want to have a confirmation message before the scheduled delivery so that I don't end up having a delivery when there's no one to pick up.	The system should process & schedule the delivery if the user confirms within the 12-hr window .
	The system should cancel the delivery if the user replies "Skip" or fails to respond within the confirmation window.

Launch

Launch Strategy/ Activities

	Phase 1 (Jan 2026)	Phase 2 (Mar 2026)	Phase 3 (May 2026)
Theme	MVP building + Internal Testing	Private beta launch (20-30 users) with 1 local pharmacy	Retain early users, test local marketing, improve UX
Duration	Month 1	Month 2	Month 3
Stakeholder	UX Designer, Engineer, QA team	Local pharmacy, beta users, QA team	Pharmacies, users, customer support
Metrics	Feature completion, Internal test users onboarded, Refill message sent + confirmed, Bug count, QA satisfaction	Active beta users onboarded, WhatsApp confirmation rate, Refill delivery success rate, Weekly feedback count, Drop-offs (users who didn't respond), Feature bug rate	Repeat refill rate (% doing 2nd refill), Family member additions, Referral usage, Auto-refill completion rate, Avg refill confirmation time

GTM Strategy
